

WHITELABEL PARAMETERS

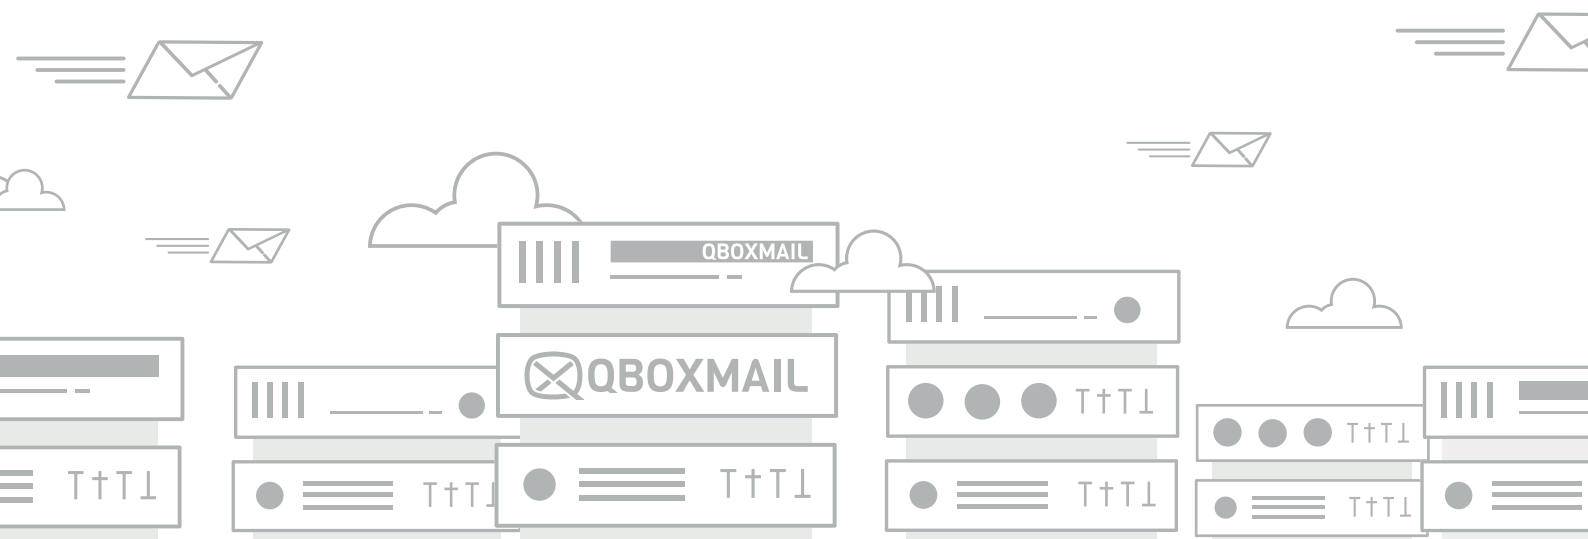

to access Qboxmail services

Qboxmail gives maximum attention to resellers. In order to leverage your own identity, Qboxmail provides **white-label** parameters (with no direct references to its brand) which can be used for setting up email services for your customers.

Using a DNS Anycast service we guarantee **maximum reliability** and **fast response time**.

Reference domains for white label configurations	cbsolt.net cloudisp.net
Control Panel	https://panel.cbsolt.net
Record MX available	mx01.cbsolt.net (priorità 10) mx02.cbsolt.net (priorità 20) --- mx01.cloudisp.net (priorità 10) mx02.cloudisp.net (priorità 20)
POP/IMAP access server POP port 995 (TLS required) / IMAP port 993 (TLS required)	pop.cbsolt.net / imap.cbsolt.net pop.cloudisp.net / imap.cloudisp.net
SMTP sending server SMTP port 465 o 587 (TLS required)	smtp.cbsolt.net smtp.cloudisp.net
Server Exchange ActiveSync (EAS)	eas.cbsolt.net
Webmail	https://webmail.cbsolt.net
Mail Time Machine	https://mtm.cbsolt.net

Always remember to:

- Configure services with active TLS/SSL support to provide users with maximum security.
- Use the provided parameters to avoid problems with SSL certificates.
- Never enter our IP addresses in clients configuration, they may change at any time without prior notice.
- Avoid the use of custom CNAME records as they are no longer compatible with the TLS/SSL support which many email clients activate by default.

Private Label

For Resellers there is a Private Label service that allows to choose a custom domain from which your customers can access the Qboxmail services . The service includes the addition of your own domain within our SSL certificates to make this configuration compatible with TLS/SSL connections.

Advantages of the private label option:

- Your customers can use a hostname linked to your domain.
- Compatibility with TLS/SSL connections.

The Private Label option is subjected to technical verification and must be first approved by Qboxmail sales department.

Custom MX Records

It is even possible to request the activation of customized MX records, linked for example to your own domain. The service includes the provision of Anycast DNS servers to be set as authoritative for the chosen domain.

The customized MX records option is subjected to technical verification and must be first approved by Qboxmail sales department.
